Comparison of Cleaning Methods of Pottery Objects Excavated from the Archaeological Sites of Hayyan Al- Mushref and Khirbet Edh- Dharih/ Jordan

Master Thesis in Conservation of Cultural Heritage

Prepared By
Sohad .Z. AL - Howaidi
Univ. No.2005761001

Supervisors
Prof. Dr. Zeidoun Al - Muheisen
Dr. Ramadan Abd - Allah

2008
Comparison of Cleaning Methods of Pottery Objects
Excavated from the Archaeological Sites of Hayyan Al-
Mushref and Khirbet Edh- Dharigh/ Jordan

By

Sohad Zaid AL - Howaidi
B.Sc. Physical Science, Yarmouk University, 2005

A Thesis Submitted in Partial Fulfillment of the Requirements for the Degree of
Master of Conservation of Cultural Heritage in the Department of Conservation
and Management of Cultural Resources
Yarmouk University, Irbid, Jordan.

Approved By:

Prof. Dr. Zeidoun Al-Muheisen…………………………….Supervisor
Professor of Classical Archaeology, Dean of Faculty of Archaeology and Anthropology,
Yarmouk University.

Dr. Ramadan Abd- Allah…………………Co – supervisor
Associate Professor of Conservation Science, Yarmouk University.

Dr. Khaled Abu – Ghanimeh……………………………..Member
Associate Professor of Archaeology, Yarmouk University.

Dr. Mustafa Al – Naddaf………………………………….Member
Assistant Professor of Conservation Archaeological Stone, Yarmouk University.
Dedication

To My Ideal Parents

For the Best and the Most Generous Brothers in the World:

Sami, Osama and Alaa

To My Lovely Sisters: Suhair and Augan

I Also Dedicate This Thesis to All My Lovely Friends
Acknowledgements

Foremost, I’m deeply grateful to Prof. Dr. Zeidoun Al- Muheisen and to Dr. Ramadan Abd–Allah for their supports, valuable advices and guidance. I’m really appreciating all the efforts that they gave to get this work in it’s final format.

I’m deeply grateful to Dr. Mustafa Al– Naddaf and Mr. Hussine Sababha for helping me in the mineralogical analysis of the samples. I’m also gratefully indebted with the efforts that laboratory stuff in the faculty of Archaeology and Anthropology offered to me, especially Mr. Musa Ali, Mr. Radoan AL– Rossan and Mrs. Sana’a Khassawneh. Special thanks for both Mr. Mohammed Debajah and Mr. Hussine Debajah for their sharing during this work.

Special thanks for my administrator Raja’a Daradkeh for her cooperating and considering. Also I’m thankful to my school partners for their considering, especial thanks to my lovely friends Bia’a Al– Omary and Enass Break for their helping and sharing during this work, also special thanks to my best friend Salma Omar for her sharing during this work and for her valuable advices and supports.

I would like to thank both my uncle Zakaria Abu AL– Dahab and my ant Moftaker Abu AL– Dahab for their helping and supporting me during all my studying days.

Also I’m deeply grateful to my parents for their unlimited supports. All thanks, to my brothers Sami, Osama and Ala’a for their generous gives and all what they did in supporting me. Also I would like to thank my sisters Suhair and Razan for their supports.

Finally, thanks for everyone that support me to complete this work.
Table of Contents

Dedication ................................................................. II
Acknowledgments ...................................................... III
Table of Contents ...................................................... IV
List of Figures .......................................................... XIII
List of Tables ........................................................... XI
List of Abbreviations .................................................. XII
Abstract ............................................................... XIII
Abstract in Arabic .................................................... XV

Chapter One: Introduction

Introduction ............................................................. 1
Statement of the Problem ............................................. 2
Objectives of the Research .......................................... 2
Methodology ............................................................ 3
Literature Review ...................................................... 5

Chapter Two: The Field Study

The Archaeological Sites ............................................. 8
A) Hayyan al-Mushref Archaeological Site ......................... 9
   Location .................................................................. 9
   Climate .................................................................. 10
   Geology .................................................................. 11
   Soil ...................................................................... 13
   Archaeological Background .................................... 14
Table of Contents

B) Khirbet edh – Dharah Archaeological Site ........................................ 19

Location .................................................................................................. 19

Climate ................................................................................................. 20

Geology ............................................................................................... 21

Soil ....................................................................................................... 23

Archaeological Background ................................................................. 23

Chapter Three: Technology of Ancient Pottery

Preparing the Raw Materials ................................................................. 28

Plastic Raw Materials ......................................................................... 28

Non Plastic Raw Materials .................................................................. 31

Temporary Raw Materials .................................................................. 33

Forming Process .................................................................................. 34

Hand Forming ...................................................................................... 34

Wheel Forming .................................................................................... 35

Composite techniques .......................................................................... 36

Surface Treatment ................................................................................ 37

Drying Process ..................................................................................... 37

Firing Process ....................................................................................... 39

Chapter Four: Deterioration Factors and Phenomena of Pottery

Objects

Water ...................................................................................................... 42

Oxygen ................................................................................................. 44

Acidity and Alkalinity .......................................................................... 45

Salts ...................................................................................................... 46

Temperature ......................................................................................... 49
# Table of Contents

Wind Erosion.........................................................50  
Light...............................................................50  
Organisms............................................................51  
Air Pollution.......................................................52  
Manufacturing and Using Defects.................................53  
Dirt Effects..........................................................54  

## Chapter Five: Cleaning Philosophy and Methodology

Mechanical Cleaning Techniques.................................64  
Dust and Polishing Techniques....................................65  
Picking Techniques..................................................66  
Abrasives Techniques...............................................67  
Vibration Techniques................................................69  
Laser Cleaning.......................................................70  
Wet Cleaning........................................................72  
Chemical Cleaning................................................74  
Solvents..............................................................74  
Enzymes..............................................................74  
Alkalis.................................................................75  
Acids.................................................................75  
Sequestering Agents................................................76  
Solvent Packs and Poultices......................................77  
Bleaches.............................................................78  
Especial Cleaning Processes......................................79  

## Chapter Six: Analytical and Applied Study

Object No. A............................................................86
| Description | 86 |
| Condition Assessment | 87 |
| Mineralogical Composition Determination | 88 |
| Cleaning Processes | 90 |
| Object No. B | 94 |
| Description | 94 |
| Condition Assessment | 95 |
| Mineralogical Composition Determination | 96 |
| Cleaning Processes | 97 |
| Object No. C | 100 |
| Description | 100 |
| Condition Assessment | 101 |
| Mineralogical Composition Determination | 101 |
| Cleaning Processes | 103 |
| Object No. D | 106 |
| Description | 106 |
| Condition Assessment | 107 |
| Mineralogical Composition Determination | 107 |
| Cleaning Processes | 109 |

**Chapter Seven: Conclusions and Recommendations**

| Conclusions | 112 |
| Recommendations | 115 |
| References | 116 |
