Investigating Earthquake Damages of the Ancient City of Gadara (Umm Qais): an Archaeoseismological Approach

By

Naheel Majed Al-Azzam

A Thesis Submitted in Partial Fulfillment of the Requirements for the Degree of Master of Science in Geology

At

Yarmouk University

December, 2012

Examination Committee Members:

Dr. Rasheed Abedelkareem Jaradat Chair

Dr. Khaled Shenwan Al-Bashaireh Co-chair

Prof. Nabil Saifuldin Abderrahman Member

Prof. Eid Abdel Rahman Al-Tarazi Member
بسم الله الرحمن الرحيم

"أولم يسيروا في الأرض فبينما كانوا عائِبة آلافٍ من مِّن قبِلهم كانوا آسًا منْهُم فَٰوَادِرُوا الأَرض وَعَمَّوْهَا أَكْثَرَ مِمَّا عَمِّرُوهَا وجاءْتُهم رِسَالَتُهم بالِّبَيْنَاتِ فَمَا كانَ اللَّهُ لِيُظْلِمِهمْ وَلَكِنَّ كَانُوا أنفُسَهُمْ يُظْلِمُونَ" [الريم (9)]

صدق الله العظيم
DEDICATION

To my loved Mother

To my Father’s soul
ACKNOWLEDGEMENT

First of all, praise and thanks for Allah who enable me to achieve this work, and peace be upon his final prophet and messenger Mohammed.

I would like to express my deepest gratitude to my supervisor Dr. Rasheed Jaradat for his direct supervision, continuous help and encouragement throughout this work despite his heavy duties.

I also want to thank my co-advisor Dr. Khaled Bashairhe for his valuable suggestions and encouraging comments.

I want to thank Dr. Muheeb Awawdeh for his help and support.

Also, I would like to express my deepest thanks to all persons who support me in some way or another during this work, especially Mohammed Bani Younes, Amer Al-Omari, Nabeel Taani, and Tariq Khamaishe for their help during field work, Dr. Abdullah Alawneh and Dr. Abdullah Rawabdeh for their help. I, also, would like to extend my thanks to the academic staff of the Department of Earth and Environmental Sciences. More thanks go to my friends for their help and support.

Finally, my most gratitude and appreciation go to my mother, sisters and brothers for their support and encouragement and to everyone who support me.

LIST OF TABLE ....................................................................................................... XXV

ABSTRACT .................................................................................................................. XXVI

الخلاصة ................................................................................................................... XXVIII

Chapter One: .......................................................................................................... 1

1 Introduction .......................................................................................................... 1

1.1 Preface: ........................................................................................................... 1

1.2 The Study Area: ............................................................................................ 6

1.3 Historical background: .................................................................................. 15

1.4 Literature Review: ......................................................................................... 18

1.5 Objectives of the study: .................................................................................. 24

1.6 Significance of the study: ............................................................................... 25

1.7 Structure of the thesis .................................................................................... 25

Chapter Two: ....................................................................................................... 27

2 Methodology ....................................................................................................... 27

2.1 Introduction: ................................................................................................... 27

2.2 Adopted methodology: ................................................................................... 27

Chapter Three: ................................................................................................... 42
3 Seismotectonics of the Dead Sea Rift: .................................................. 42

3.1 Introduction: .................................................................................. 42

3.2 Historical seismicity of the DST region: ........................................ 51

3.3 Reported Archaeoseismic Damages of the Region: ......................... 60

Chapter Four: .................................................................................. 68

4 Archaeoseismological Observation of the Ancient City of Gadara... 68

4.1 Introduction: .................................................................................. 68

4.2 Observed earthquake related damages: ........................................ 76

4.3 Discussion: ................................................................................... 126

4.4 Concluding remarks: .................................................................... 148

5 Conclusions and recommendations: ................................................ 160
