Museum Storage Assessment: A case study from the Museum of Jordanian Heritage – Yarmouk University

By:

Mohammad M. Debajah

B.Sc. Cultural Heritage Management and Museology, Hashemite University, 2006

A thesis submitted in partial fulfillment of the requirements for the degree of Master of Art in the Department of Conservation and Management of Cultural Resources, Yarmouk University, Irbid, Jordan

Approved By:

Dr. Mustafa Al-Naddaf..................................................Supervisor and Chairman
Assistant Professor, Head of the Department of Conservation and management of Cultural resources, Yarmouk University.

Prof. Dr. Ziad al Sa'ad..................................................Member
Professor, Department of Conservation and Management of Cultural Resources, Vice President of Yarmouk University.

Dr. Ramadan Abd-Allah.................................Member
Associate Professor, Department of Conservation and management of Cultural resources, Yarmouk University.

Dr. Fadi Bala'awi..........................................................Member
Assistant Professor, Head of the Department of Conservation Science, Hashemite University.

To My Beloved Parents

To My Lovely Sisters and Brothers
Acknowledgment

I would like to express my deepest thanks and acknowledgments to my supervisor Dr. Mustafa Al-Naddaf for his infinite guidance and advice in the accomplishment of this study and for his trust and support.

I would like to thank to Prof. Dr. Ziad al Sa’ad, Dr. Ramadan Abdullah, and Dr. Fadi Bala’awi for accepting to be members of my defence committee.

I am specially obliged to the staff of the Museum of Jordanian heritage: Dr Aatef Al- Sheyab the curator of the museum. Mr. Mahmoud Abo Dalo, Mr. Zahrin Al-Jarah and Mr. Mohamamd Nawasreh for standing up in every thing I needed.

Deep thanks are due to the technical staff of the Laboratories Unit in the Faculty of Archaeology and Anthropology: Mrs. Sana’ Khasawneh, Mr. Musa Ali and Mr. Radwan Al-Rousan for their fruitful cooperation in conducting the laboratory work.

I like to express my gratitude and appreciation to Mr. Hussein Sababiah who has dedicated his time and effort to do XRD analysis. And also Great thanks to eng. Khaledun Mahazah and Mr. Mohamamd Al- Kawaja from Geology Department for his assistant in SEM and AAS analysis. I should thank Arch. Fandi Alwaked for his assistance to draw the plans for the storage.

Special thanks to all my friends and colleagues for encouraging and helping me: Yazan Abu Alhasan, Mohammad Alazaizeh, Mahmoud Alwan, Tarig Mhairat, Nihad Hindawi, Amani Rawaqah, Dima Alqadi, Salma Omar, Raghad Alfaisal, Ala’a Shabeeb, and Yasmeen Al-Badareen.

I also greatly appreciate to the photographer of Faculty of Archaeology and Anthropology my uncle Mr. Hussein Debajah for his helping in taking the photograph and for his encouragement during my study.
Lastly, my very deep gratitude to my dear family, who always have been there for me. And believed that I can make it, I cannot thank her enough for her patience, helpfulness and encouragement throughout the research. To all who stood by my side, supported me and gave me hope in future, I would like to say Thank you.....

Abstract in Arabic ...................................................................... xiv

1. Chapter one: Introduction .................................................. 1
   1.1. General ........................................................................ 2
   1.2. Objectives of the Study .................................................. 4
   1.3. Importance of the Study .................................................. 4
   1.4. Methodology ................................................................. 5
   1.5. Literature review ........................................................... 6

2. Chapter two: Deterioration of Museum objects .................. 11
   2.1. Introduction .................................................................. 12
   2.2. The agents of deterioration in museums ...................... 12
      2.2.1. Air pollution ......................................................... 13
      2.2.1.1. Gaseous pollution ........................................... 13
      2.2.1.2. The effects of gaseous pollution on the museum
               objects ................................................................. 14
      2.2.1.2. Air particulate ................................................. 17
      2.2.2. Temperature and relative humidity ..................... 18
2.2.2.1. Temperature........................................... 19
2.2.2.2. Relative humidity...................................... 20
2.2.3. Light.......................................................... 22
2.2.4. Bio-deterioration........................................... 22
2.2.5. Deterioration by storage and display materials........... 23
2.3. Deterioration of museum objects............................... 26
  2.3.1. Deterioration of inorganic museum objects................. 26
    1.3.1.1 Metals.................................................. 27
    1.3.1.2 Ceramics and stones................................... 29
    1.3.1.3 Glass.................................................... 30
  2.3.2. Deterioration of organic museum objects.................. 30

3. Chapter three: Preventive conservation in storage............... 32
  3.1. Introduction.................................................. 33
  3.2. Environmental requirement for museum objects................ 34
    3.2.1. Relative humidity...................................... 35
    3.2.2. Temperature.............................................. 36
    3.2.3. Light..................................................... 36
    3.2.4. Insect pests.............................................. 38
    3.2.5. Air pollution............................................. 39
    3.2.6. Storage and display materials............................ 40

4. Chapter four: Methods and Techniques............................... 42
  4.1. Introduction.................................................. 43
  4.2. Sampling...................................................... 43
4.3. Storage environment monitoring .............................................. 44

4.4. Examination of deterioration forms for the objects in the storage ......................................................... 47

5. Chapter five: Results and Discussion .......................................................... 48

5.1. Introduction ........................................................................... 49

5.2. Agents of the Deterioration in Storage of museum of Jordanian heritage .............................................................. 49

5.2.1. Temperature and relative humidity in storage of museum of Jordanian heritage ........................................ 50

5.2.2. Light in storage of museum of Jordanian heritage .................................................................................. 55

5.2.3. Air particulate in storage of museum of Jordanian heritage ....................................................................... 56

5.2.3.1. X-Ray Powder Diffraction (XRD) ......................................................................................... 56

5.2.3.2. Atomic absorption spectroscopy (AAS) and Ion chromatography (IC) ............................................. 60

5.2.3.3. Scanning Electron Microscope (SEM) .................................................................................. 61

5.2.4. Insects, pest, and micro-organisms in storage of museum of Jordanian heritage ........................................ 63

5.2.4.1. Visual inspection ................................................................................ 63

5.2.4.2. Sticky Traps ................................................................................. 64

5.2.5. Tests for Materials used in Direct Contact with objects ........................................................................ 67

5.3. Deterioration of Museum objects in the storage of museum of
5.3.1. Case 1; Pottery object in the Heritage room

5.3.2. Case 2; Staining by corroded shelf on the pottery jar

5.3.3. Case 3: Staining by corroded shelf and deposition of airosoles on the ceramic plate

5.3.4. Case 4: Fungal growth and flaking of corrosion layer of glass

5.3.5. Case 5: Hard crust on the surface of pottery jar

5.3.6. Case 6: Micro-organism growth on the organic objects

5.3.7. Case 7; salt crystallization in the pottery objects

5.3.8. Case 8; down fall of fibres from textile objects

5.3.9. Case 9: Holes in the wooden objects

5.4. Conclusion and recommendation

5.4.1. Conclusion

5.4.2. Recommendation and Action plan
